BUILT ON GOLD. TESTING FOR SCALE.

Initial Gold Resource with Copper Porphyry Potential

Q2 - 2026 Corporate Presentation

Partnered with

OCEANAGOLD

Disclaimer

This Presentation is not an offer to buy or sell the securities referenced herein, nor has the Securities and Exchange Commission or any state, provincial or territorial regulatory authority determined if this Presentation is truthful or complete. Any representation to the contrary is a criminal offense.

The securities described herein have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act"), or the applicable securities laws of any state of the United States and may be offered and sold in the United States only in reliance upon an exemption from the registration requirements of the U.S. Securities Act and in accordance with any applicable securities laws of any state of the United States.

Each prospective investor must rely on his or her own examination of Carolina Rush ("RUSH") and the terms of the offering, including the merits and risks involved in making an investment decision with respect to the securities. The Company makes no representation or warranty, express or implied, and assume no responsibility for the accuracy, reliability or completeness of the information contained in this Presentation.

Forward – Looking Statements

This Presentation includes "forward looking statements", within the meaning of applicable securities legislation, which are based on the opinions and estimates of management and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "budget", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar words suggesting future outcomes or statements regarding an outlook. Such risks and uncertainties include, but are not limited to, risks associated with the mining industry (including operational risks in exploration development and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainties involved in the discovery and delineation of mineral deposits, resources or reserves; the uncertainty of resource and reserve estimates and the ability to economically exploit resources and reserves; the uncertainty of estimates and projections in relation to production, costs and expenses; the uncertainty surrounding the ability of RUSH to obtain all permits, consents or authorizations required for its operations and activities; and health and safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the ability of RUSH to fund the capital and operating expenses necessary to achieve the business objectives of RUSH, the uncertainty associated with commercial negotiations and negotiating with foreign governments and risks associated with international business activities, as well as those risks described in public disclosure documents filed by RUSH. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in securities of RUSH should not place undue reliance on these forward-looking statements.

Readers are cautioned that the foregoing lists of risks, uncertainties and other factors are not exhaustive. The forward-looking statements contained in this Presentation are made as of the date hereof and the RUSH undertakes no obligation to update publicly or revise any forward-looking statements contained in this Presentation or in any other documents filed with Canadian securities regulatory authorities, whether as a result of new information, future events or otherwise, except in accordance with applicable securities laws. The forward-looking statements contained in this Presentation are expressly qualified by this cautionary statement.

Historical Results

This Presentation contains past mineral exploration results. RUSH has not yet completed the work necessary to verify those past exploration results and the results should not be relied upon. In addition, this Presentation contains information with respect to adjacent mineral properties obtained through public ally available documents. Such information has not been independently verified by RUSH and is not necessarily indicative of the mineralization on RUSH's projects.

The technical and scientific information in this Presentation has been reviewed and approved by Patrick Quigley, MSc, CPG-12116, a Qualified Person as defined by NI 43-101 of the Canadian Securities Administrations.

Mineral Resource Estimate

Technical Disclosure

All scientific and technical information relation to the Mineral Resource Estimate ("MRE") of the Brewer Gold-Copper Project contained in this presentation is derived from the news release dated August 8, 2025 titled "Carolina Rush Announces Refiling of Maiden Mineral Resource Technical Report for Brewer Gold-Copper Project".

2025 MRE Notes:

Brewer In Situ Mineral Resource Estimate:

The Brewer maiden mineral resource estimate was prepared under National Instrument 43-101 ("NI 43-101") standards by Independent and Qualified Person (QP), Patrick J. Hollenbeck. The Mineral Resource Estimate (Table 1) was constructed using all available drilling information available for the Brewer project, including Carolina Rush core drilling (n = 36); Carolina Rush rotary airblast drilling (n = 194); Historical drilling (n = 1,020); and Historical production blastholes (n = 49,926). The Brewer Mineral Resources are reported at a 0.4 g/t Au cutoff considered for "reasonable economic extraction" and were calculated using a 3-year gold price (Jan. 2022 – Dec. 2024) of US$2,045/oz and an assumed all-in mining and processing cost of US$26/tonne.

- Mineral Resources, which are not Mineral Reserves, do not have demonstrated economic viability.
- The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.
- The Mineral Resources in this report were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council.

Brewer In Situ Mineral Resource Estimate Methodology

- Domain Modeling: A mineralized envelope was constructed from 6-meter drill hole composites of the Carolina Rush and Historical drilling samples using Leapfrog Geo's "Indicator Shell" functionality. A 0.25 g/t Au cutoff was derived from histogram population analysis and was used to construct the mineralized envelope. Drillhole intersecting the mineralized envelope were then composited to 3-meter intervals for grade estimations.
- Block Model Construction: The block model was constructed from regular 9m x 9m x 3m blocks using the EDGE estimation tools in Leapfrog Geo software.
- Bulk Density: A density of 2.92 g/cm3 was assigned to mineralized blocks while a density of 2.84 g/cm3 was used for the surrounding material. Densities were assigned based on 731 specific gravity measurements of drill core made by Carolina Rush personnel.
- Interpolation and Search Parameters: Two estimation methods were utilized to generate the Brewer resource; Inverse Distance Squared (ID2), and nearest neighbor (NN). The ID2 estimators are the basis for the resource report, while the NN estimations served as a validation check for the ID2 estimations. Variable anisotropy was used to drive the mineralized envelope and ID2 estimators, intended to capture the curved nature of the central portion of the deposit along with the more planar nature of the southern Tanyard Breccia zone.
- Model Validation: The block model was validated with a detailed visual comparison of the blocks and drillholes together in vertical and plan view sections (Figure 1). Swath plots along the X, Y, and Z axes of the block model were also utilized for statistically validating the block model.
- Grade Sensitivity Analysis: The gold cutoff grade selected for the Brewer deposit can have significant implications for the total resource reported.

Brewer Backfill Mineral Resource Estimate:

The previously mined open pits at the Brewer project have been backfilled with the waste rock and heap-leached ore generated from the previous mining activities. The backfill material lies above a large portion of the Brewer in situ Mineral Resource and would need to be removed in the event the Brewer mine is re-started. As such, Carolina Rush has drilled six large diameter sonic holes through the backfill to determine the gold content of this material. The material was categorized based on its acid-generating potential and backfilled into the pit as discrete layers "HLP1-4" oxidized ore, "HLP5-6" mixed to unoxidized ore, and "Waste Rock".

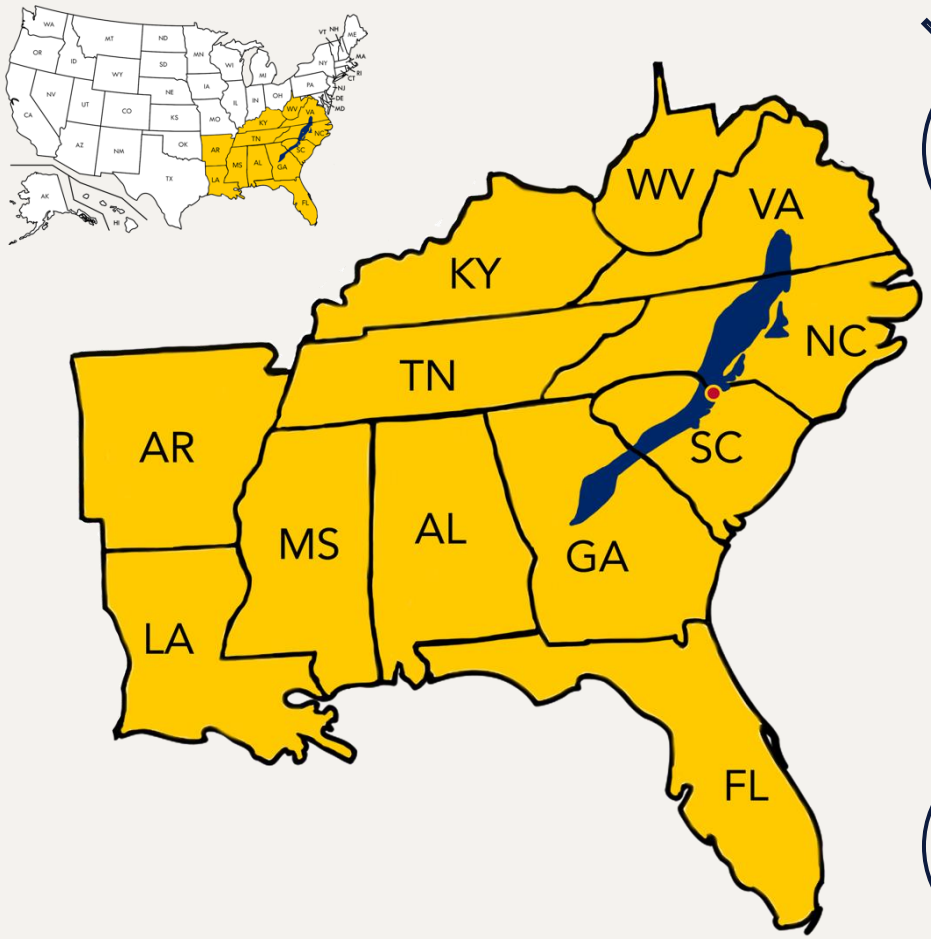
- Mineral Resources, which are not Mineral Reserves, do not have demonstrated economic viability.
- The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve.
- The Mineral Resources in this report were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council.
- Details on the metallurgical properties and processing methods required to extract gold and copper from the backfill material have not been undertaken. As such, the Backfill resource is considered theoretical and additional studies are required to report the inferred resources at a higher level of confidence.

Brewer Backfill Mineral Resource Estimate Methodology

- Domain Modeling: Each backfill domain was modeled as a discrete wireframe and clipped to the surface of the historic open pit and topographic surfaces.
- Block Model Construction: The block model was constructed from regular 5m x 5m x 3m blocks using the EDGE estimation tools in Leapfrog Geo software.
- Bulk Density: A bulk density of 2.2g/cm3 was assumed for the backfill material which provides a reasonable correlation of the total tonnage of material removed and backfilled into the open pit as documented by the previous operator.
- Interpolation and Search Parameters: Each backfill domain was estimated independently using Leapfrog Geo's Radial Basis Function (RBF) numerical modeling function.
- Model Validation: The backfill resource model was validated using visual examination in various global and cross-sectional orientations, as well as back-flagging the RBF estimators onto the drillhole assay table and checking scatter plots of the comparative grades. Swath plots were also examined but the sparse density of drillholes in the backfill material limits the ability to understand how the estimators are performing. Figure 2 provides an example of the visual validation of the backfill resource model.
- Grade Sensitivity Analysis: No grade sensitivity analysis was conducted for the backfill resource model; the reported resource does not apply a cutoff grade as it assumes that all backfill material will need to be removed and processed to support mining of the in-situ resource below the backfill.

A NI 43-101 Technical Report supporting the Maiden Mineral Resource Estimate was filed on SEDAR+ at www.sedarplus.ca. Investors are encouraged to review the full report, which will provide further details on key assumptions, parameters, and risks associated with the Mineral Resource Estimate.

Why Carolina Rush & Why Now



Backed by a Gold Producer

- OceanaGold committing to up to US$20M to test the system

First-Ever Deep Drilling

- Initial drilling targeting underlying copper porphyry system

Existing Gold Resource

- 192k oz indicated + 349k oz inferred provides baseline value

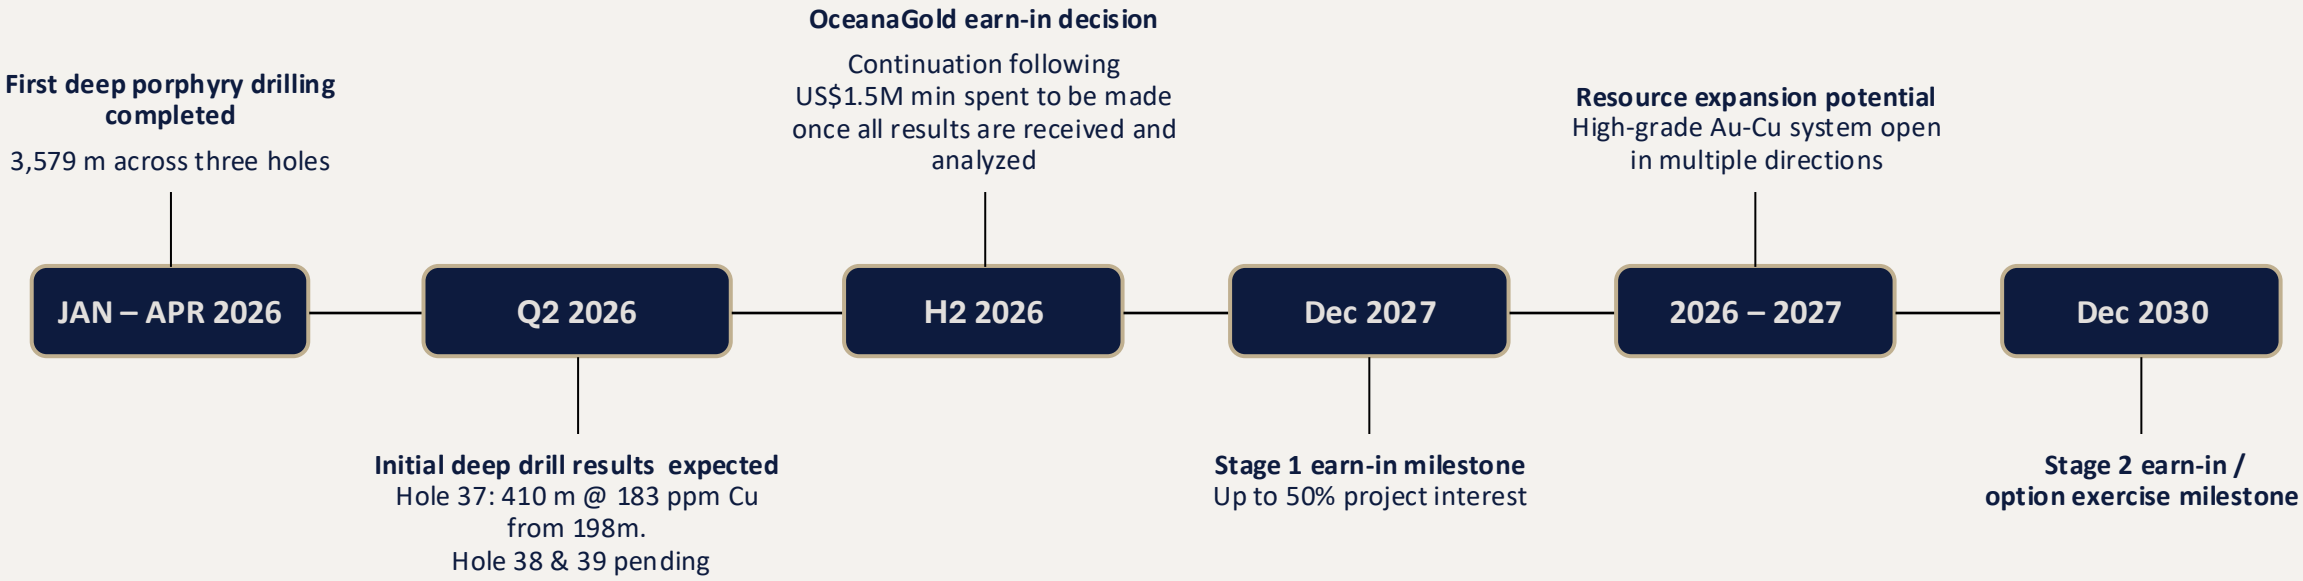
Initial Deep Drill Results Confirmed System at Depth

- Alteration zonation from Hole 37 informing Phase 2 target definition; results from Holes 38 & 39 pending

Backed by a Mid-Tier Gold Producer

OceanaGold is funding the initial deep drill test of the porphyry target

TESTING THE PORPHYRY TARGET



RUSH retains 20% carried interest until US$20M spent on exploration

OceanaGold Earn-In Structure

Agreement entered September 15, 2025

STAGE	EXPENDITURE	OGC INTEREST	DEADLINE
Stage 1 Minimum Spend	US$1.5M	0%	12 months
Stage 1 Full	**US$8M**	50%	Dec 2027
Stage 2	**US$12M**	80%	Dec 2030
Option Exercise	**~U$26.7M**	80%	Dec 2030

Key Terms:

- OceanaGold operates Haile, 13 km away – they have direct geological knowledge of the district
- Minimum commitment ($1.5M) drilling completed (Jan – April 2026)
- If OceanaGold exercises before spending US$20M on exploration, Carolina Rush is carried to that threshold

Carolina Rush retains a 20% interest carried through to the US$20M in exploration spend – no further capital required if OceanaGold exercises the option

Brewer Maiden Mineral Resource Estimate

In situ & pit backfill

Summary of 2025 Maiden Mineral Resource Estimate						
Resource Classification		Au		Cu		Tonnes (Mt)
		Oz	Au g/t	M lbs	%	
In Situ (0.4 g/t Au cutoff)	Indicated	192,000	0.97	16.7	0.13	6.2
	Inferred	210,000	0.74	8.3	0.04	8.8
Backfill Material	Inferred	139,000	0.36	9.7	0.03	11.9

Backfill resource considered theoretical pending metallurgical studies. See notes on slide 3 for MRE Technical Disclosure

Brewer Inferred Backfill Mineral Resource Statement					
Classification	Mass (thousand tonnes)	Average Value		Material Content	
		Au (g/t)	Cu (ppm)	Au (Thousand oz)	Cu (thousand lbs)
HLP 1-4	2,000	0.17	94	11	414
HLP 5	1,570	0.49	863	25	3,007
HLP 6	2,429	0.22	292	17	1,561
Waste Rock	5,892	0.46	313	86	4,068
Total	**11,900**	**0.36**	**345**	**139**	**9,050**

Differences may occur in totals due to rounding

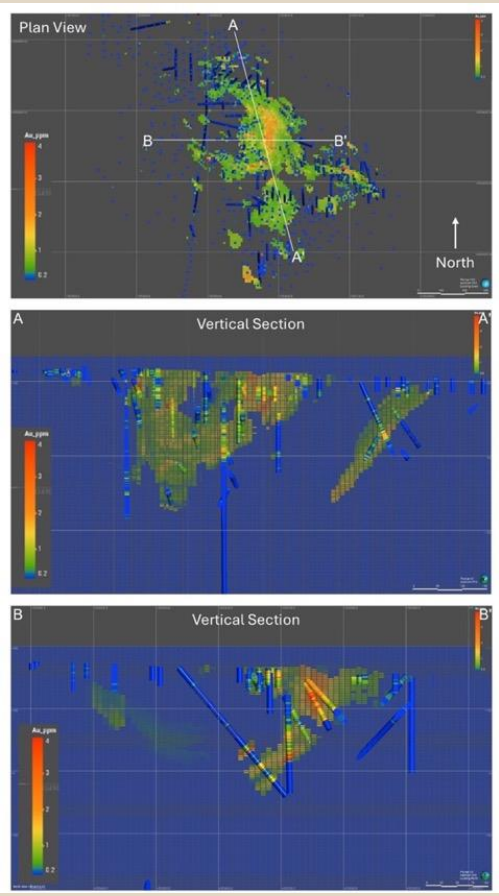
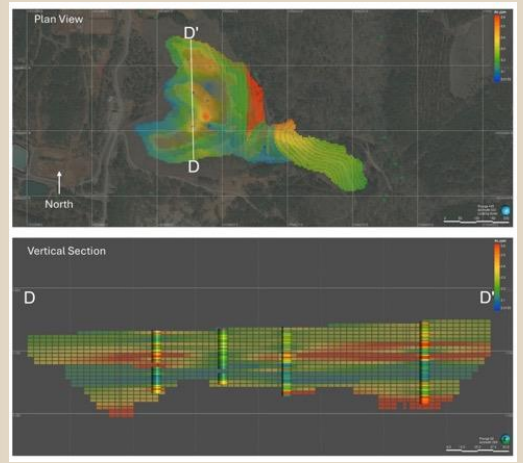
Brewer In Situ Mineral Resource Visual Validation



Brewer Backfill Mineral Resource Visual Validation



The Porphyry Target

Diatreme breccias and porphyry target

Geological evidence is consistent with a larger system at depth

Brewer's epithermal Au-Cu mineralization at surface is consistent with the high-level expression of a porphyry Cu-Mo-Au system at depth.

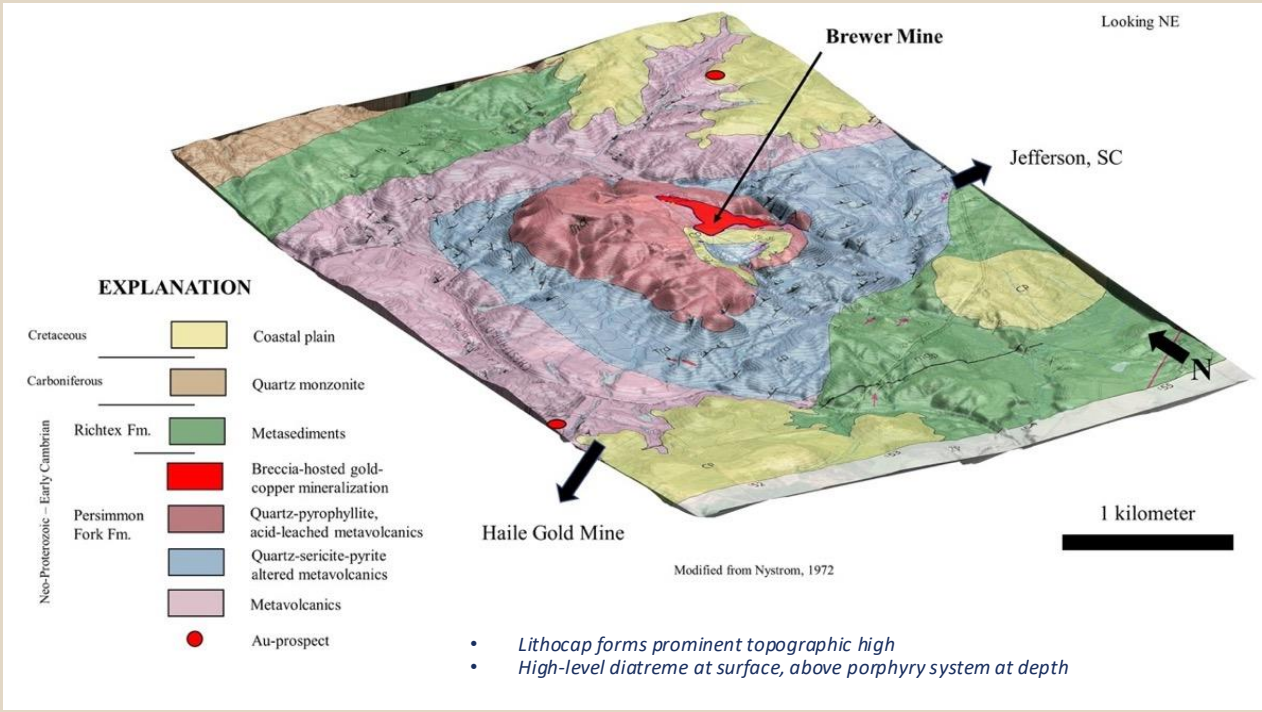
Four independent data streams points to depth

Geological mapping → geochemical vectoring → MT-IP geophysics → drill hole mineralogy. All converge on the same inferred intrusion below and northwest of the former pit.

OceanaGold funding the test

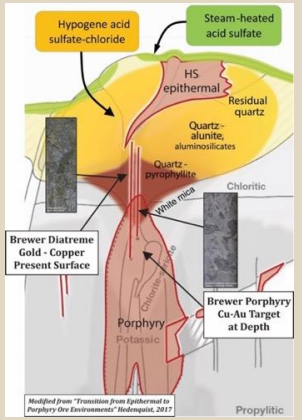
The Stage 1 drill program targets the low-resistivity body at 1,500m depth. Results from DDH 37 & 38 pending.

Brewer Geology: Exploration Model

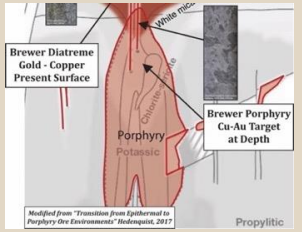


- *Lithocap forms prominent topographic high*
- *High-level diatreme at surface, above porphyry system at depth*

Porphyry Cu Model Cross Section



Brewer Level

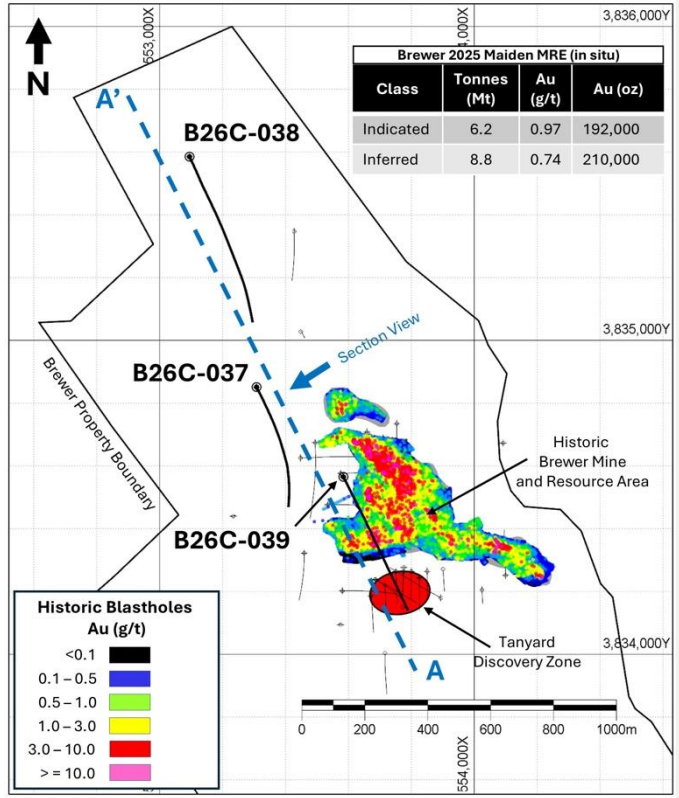


First Systematic Deep Drill Program at Brewer

3,579 meters completed across three holes

- Over 3,579 m completed across three holes:
  - Hole 37: 1,288 m
  - Hole 38: 1,374 m
  - Hole 39: 917 m
- Confirmed a large hydrothermal alteration system extending to depths exceeding 1 km
- B26C-037: 410m @ avg. 183 ppm Cu from 198m downhole incl. 78m @ 260 ppm Cu and 14m @ 490 ppm Cu. Background <50 ppm Cu. No economic gold-copper mineralization identified
- Copper hosted in chalcopyrite, the primary copper mineral associated with porphyry systems
- Porphyry-style veining (B-type) and multi-phase intrusive dikes identified — consistent with a magmatic-hydrothermal system
- Alteration zonation provides a northwest vector toward a potential porphyry source
- Results from Holes 38 and 39 pending

Location of Phase 1 Deep Drill Holes



Results from Hole 37 received. Holes 38 & 39 pending.

Key Geological Observations from Hole 37

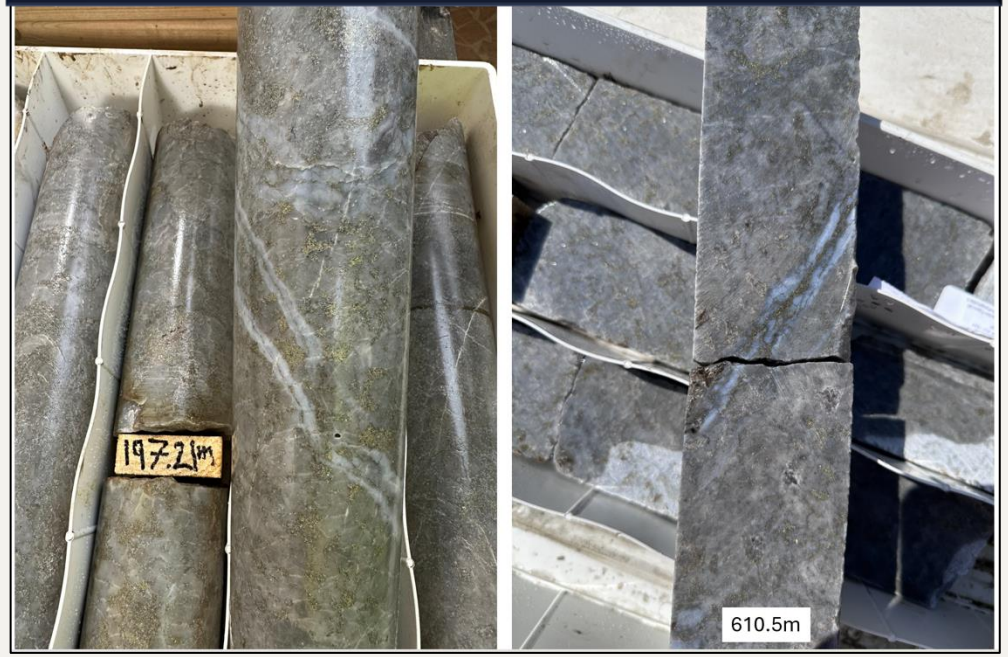
Informing the Company's Exploration Model

- 410m of **chalcopyrite-bearing copper** mineralization
- B-type veining at multiple depths; highest density 170–223m and 570–640m
- Alteration zonation and geophysical reinterpretation vector northwest — Hole 38 collared 750m NW
- No porphyry centre identified to date; Phase 2 targets northwest extension

References to porphyry-style mineralization are conceptual. No certainty that further drilling will define economic mineralization.

Core Photos of Chalcopyrite in Hole 37

Core Photos of Quartz-Sulfide "B-Type" Veins in Hole 37



Interpretation and Next Steps

Results pending for Hole 38 & 39

Hole 37

- MT anomaly = alteration contrast, not intrusive body
- System vectors northwest and at depth

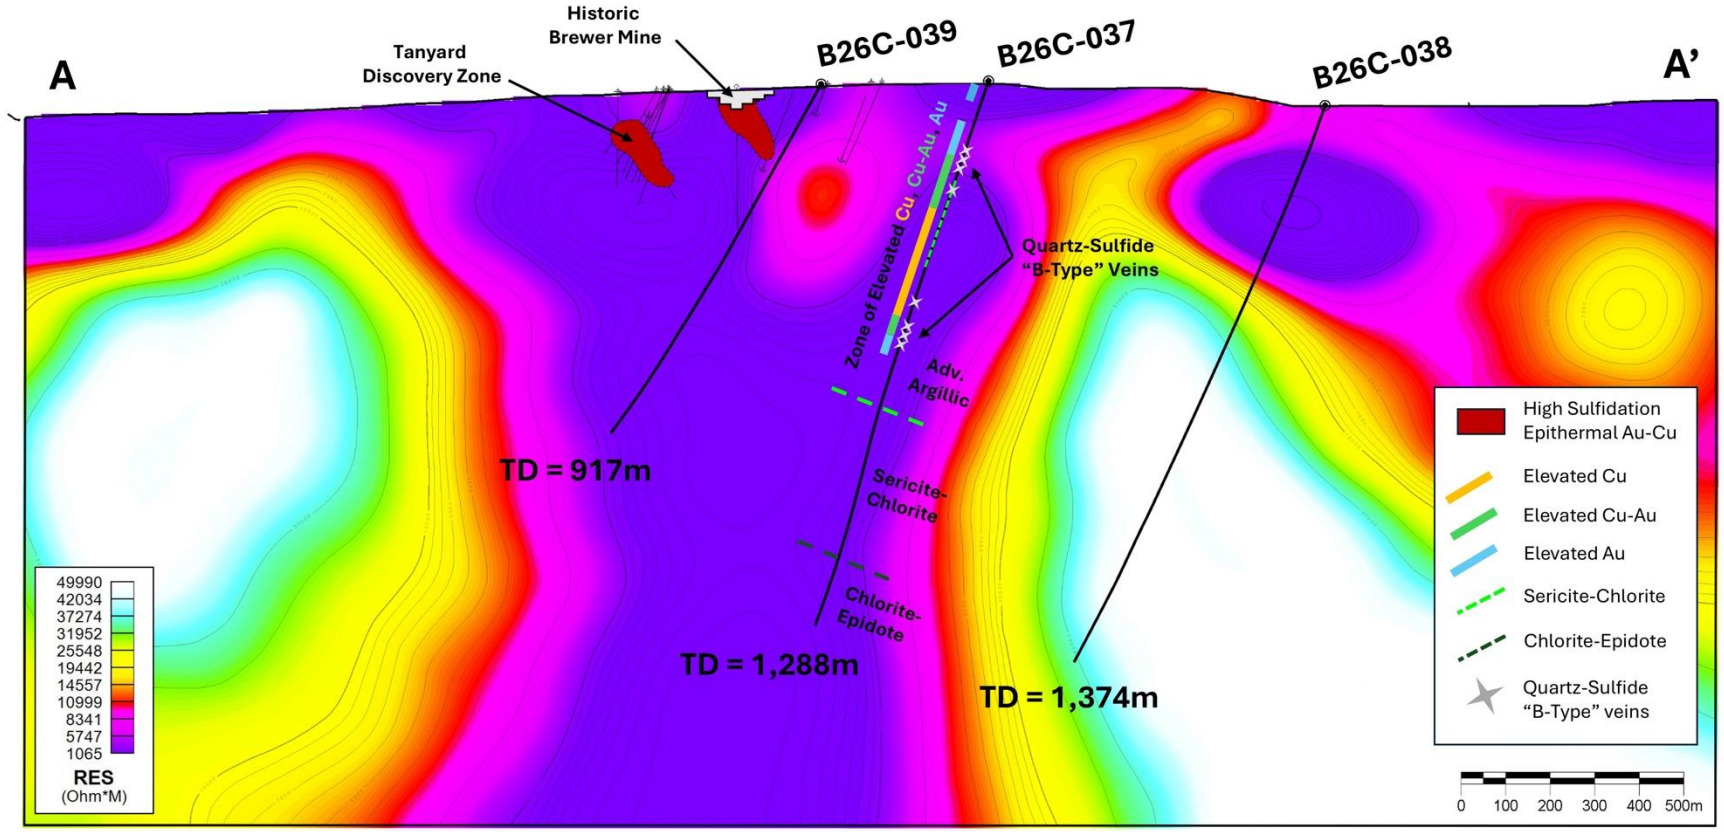
Status

- Hole 38 & 39 results pending
- Full dataset integration underway

Next Phase

- Phase 2 targets northwest extension where system strengthens
- OceanaGold path forward pending all results

MT-IP Line 3 Resistivity Section (looking SW) and Location of Deep Drill Holes



Key Investment Considerations

Value drivers at current stage

Major-funded exploration

- OceanaGold spending up to U$20M;
- RUSH carries no exploration cost

Established resource baseline

- 192k oz Au Indicated + 349k oz Au Inferred based on only 36 holes

Drill-tested porphyry target

- Hole 37 confirmed 410 m of chalcopyrite-bearing Cu mineralization at depth (consistent with magmatic-hydrothermal porphyry systems)

Favourable jurisdiction

- Brownfield site in pro-mining South Carolina with established permitting precedent

Management Team

Operational leadership advancing exploration, strategy and execution

LAYTON CROFT – President, CEO & Director

- 30 years global experience, including 20 years in mining and exploration
- Senior roles with Ivanhoe Mines, Rio Tinto Peabody Energy and Duke Energy
- Chairman of Erdene Resource Development; extensive experience building and advancing resource companies

PATRICK QUIGLEY, MSc, QP – Exploration Manager & Senior Geologist

- 15+ years exploration experience across base and precious metals systems
- Worked on projects from early-stage targeting to development
- Leads exploration strategy drilling execution and geological interpretation

MARK MCMURDIE – CFO

- 30+ years of senior leadership across public and private companies
- CFO of Sylla Gold Corp and KO Gold Inc.
- Provides financial oversight reporting and capital markets support

JEN SPOHN – Administration & Data Manager

- 20+ years experience in project support and environmental management
- Extensive involvement in Brewer and regional exploration programs
- Oversees data management, permitting support and operational coordination

JEANNY SO – Corporate Communications Manager

- 25+ years experience in mining-focused corporate communications and investor relations
- Leads investor engagement, strategic marketing and digital communications
- Drives market visibility and shareholder communications strategy

Directors & Advisors

Aligned expertise in discovery, capital markets and project advancement

Proven leadership across discovery, capital markets & strategic direction

LAYTON CROFT – President, CEO & Director

- See Management Page

LAURIE CURTIS – Independent Director

- Led the team behind the Tujuh Bukit gold-copper discovery (Indonesia) – a strong analog to Brewer
- 50+ years global experience across exploration, development and executive leadership
- Brings deep technical perspective on large-scale mineral systems

DON MCLEAN – Independent Director

- Senior gold analyst at Paradigm Capital, focused on the resource sector
- CFA; experience across institutional sales and investment management
- Provides capital markets insight and investor positioning

BRAHM SPILFOGEL – Independent Director

- 25+ years managing resource-focused portfolios
- Former Managing Director & Senior Portfolio Manager at RBC (>$2 B AUS across multiple funds)
- Expertise in capital allocation, M&A and public market strategy

WILLIAM M. WEBSTER IV – Independent Director

- US business leader with senior roles across Bush & Clinton administrations
- Board member of NYSE and NASDAQ-listed companies
- Strengthens governance, strategic oversight and US market presence

Technical & strategic support aligned with Brewer's discovery potential

DAVID BURROWS – Technical Advisor

- Former Chief Geologist, Vale; led global exploration programs and technical teams
- Specialist in porphyry copper-gold systems, directly relevant to Brewer's deep targets
- Provides independent oversight on drilling, geology and target development

DAVID MOSHER – Strategic Advisor

- Mining geologist with 45+ years global experience
- Discovered the world's largest undeveloped uranium deposit
- Track record advancing large-scale projects across multiple jurisdictions

PHILIP CORRIHER – Strategic Advisor

- North Carolina-based investor and significant shareholder
- Experience in mineral exploration, capital markets and commodities

KENNETH C. BROWN – Strategic Advisor

- North Carolina-based investor and significant shareholder
- Provides local expertise, business leadership and strategic insight

Carolina RUSH

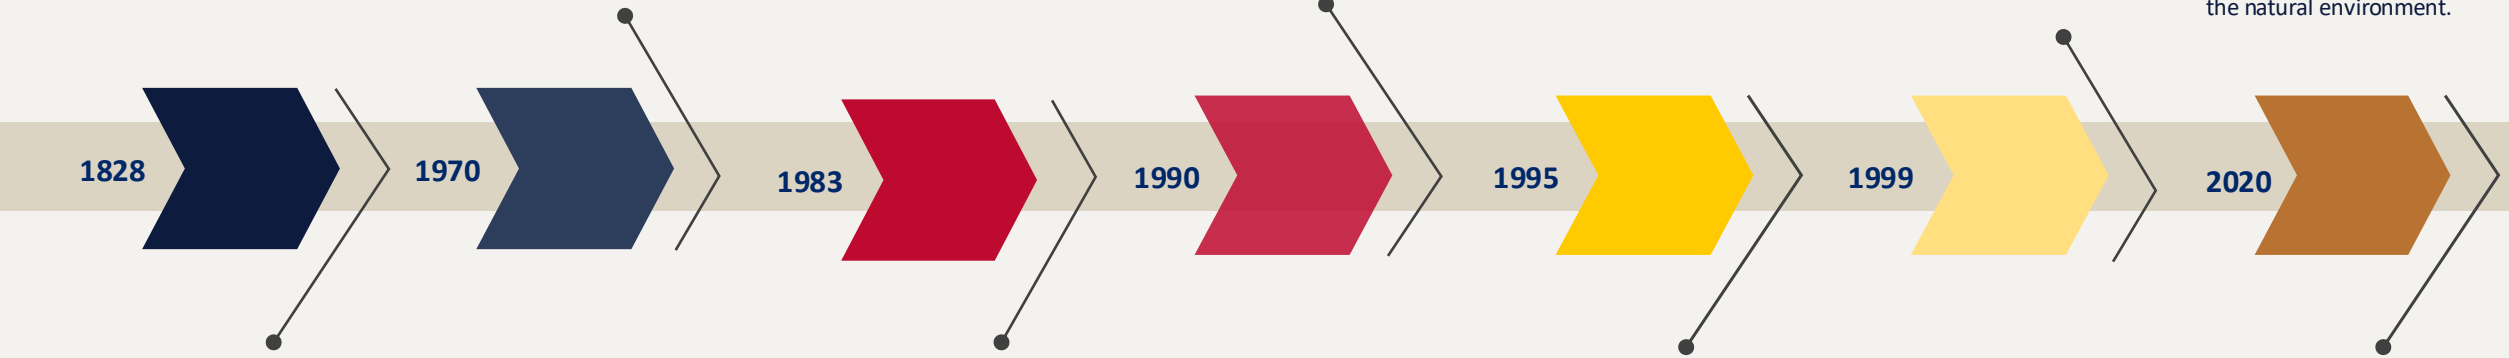
TSXV: RUSH | OTCQB: PUCCF

APPENDIX

Q2 - 2026

Brewer History

200 years of gold prospecting, exploration and mining



First Mined in 1820s

$450k of gold production was mined (2/3 from placer mining from the Tanyard Syncline and 1/3 from the open pit).

Drilling in 1970s

Drilling in the 1970s returned 64.3 m of 3.3 g/t Au and 0.5% Cu from 30.8m to 95.1 m.

Reason to believe the oxide might be heap leachable.

Circa 1983-1995

Discovery of the oxide potential of the Brewer Gold Mine in 1983-84.

High-grade oxide gold mined near surface (down to ~50 m) by oxide-specific heap leach technology, in total 178,000 oz Au from 1987-95.

Sulphide-hosted gold and copper below 30 m depth was known, but since there was no way to process it, the sulphide-rich ore was stockpiled on surface and left in the open pit.

1990 Flood Event

In 1990, following historic rainstorms, a tailings dam breached and >10 million gallons of cyanide solution contaminated the nearby creek and river.

The dam and plastic-lined tailings pond were repaired, and the company resumed mining in 1991.

Water Treatment

In 1995, Brewer Gold Company notified the State of South Carolina of its intent to stop operations at the mine.

The State required Brewer to close and reclaim the mine. During reclamation activities, acid drainage began to emerge, and Brewer constructed a water treatment plant which they operated from 1995 to 1999.

Brewer becomes a Superfund Site

When the company abandoned the site in 1999, the U.S. Environmental Protection Agency (EPA) took title to the site and oversaw water treatment operations to contain acid rock drainage.

In 2005, the EPA placed Brewer on the Superfund National Priorities List.

The EPA today confirms that Brewer, under its current control and maintenance (costing ~US$1.3 million/year) poses no threat to people at or near the site, nor to the natural environment.

RUSH Awarded Brewer Option

In February 2019, a South Carolina State circuit court appoints the Brewer Gold Receiver who was tasked to find a qualified company to explore Brewer while ensuring the property remains clean and environmentally safe.

Following a competitive process throughout 2019, Carolina Rush was selected as the winner in January 20, 2020.

Summary of Best Interceptions at Brewer
